Re: Application — Information Security Intern, Governance, Risk & Compliance (GRC) — JOBREQ00115341, London

Dear Chanel Recruitment Team,

I am a final-year Cybersecurity & Cloud Computing engineering student (ESPRIM Monastir, top of my class) and I am applying for the Information Security Intern — Governance, Risk & Compliance role in London for September 2026. GRC sits exactly where I want to build my career: connecting technical security work with governance, risk decisions and people.

What I bring is practical, not just academic. As an engineering intern at Polymaille, I am currently building a full-cycle industrial ERP, and two parts of that work map directly to this role:

1. **Access governance.** I designed the RBAC model — granular permissions and least privilege across warehouse, production and finance teams. This is hands-on exposure to how access risk is controlled and documented in a real organisation.
2. **Third-party and process.** I work on supplier orders and approval workflows, and I document every business module end-to-end with our business lead — framing processes with the user and validating them before delivery. That is the same discipline behind third-party security scorecards, risk assessments and process documentation.

On the security side, I co-founded Hunters Club (20+ members), ran security workshops and training sessions for students, and design segmented network architectures with firewalls, monitoring and Wazuh. I hold Red Team certifications (CLLMSP, CRTOM) and am preparing the Cisco CCNA. I am comfortable with data and analytics (SQL, MySQL, reporting), which supports the scorecard monitoring and risk analytics workstreams.

I am fluent in English and French, and I am available full-time from September 2026. I am prepared to relocate to London and complete any required visa process.

I would be glad to discuss how I can support the GISEC GRC team. Thank you for your time and consideration.

Sincerely,
Mohamed Ben Naima
