PROFILE

Cybersecurity & Cloud Computing engineering student (ESPRIM, top of class) who builds security into the software lifecycle rather than adding it at the end. I secure Spring Boot back ends against the OWASP Top 10 (Spring Security, JWT, BCrypt, RBAC, input validation, audit trails), automate delivery with CI/CD (GitHub Actions, GitLab CI/CD) and secrets management, and run workloads on Docker and hybrid cloud (OpenStack + AWS) behind segmented networks (pfSense, DMZ, bastion host) monitored by a Wazuh SIEM. I align controls with ISO/IEC 27001:2022 Annex A. CTF player and Securinets member. Looking for a DevSecOps / cloud security PFE starting January 2027.

TECHNICAL SKILLS

Application Security: OWASP Top 10, secure coding, Spring Security, JWT, OAuth2, OpenID Connect, BCrypt, RBAC / least privilege, input validation, audit logging

Identity & Access Management (IAM): Keycloak (SSO, OIDC), Active Directory, Kerberos

CI/CD & DevOps: GitHub Actions, GitLab CI/CD, secrets management (GitHub Secrets, SSH keys), Docker, Nginx, Kubernetes, Git

Cloud: AWS (EC2), OpenStack private cloud, hybrid cloud deployment

Network Security: pfSense firewalls, DMZ, network segmentation, bastion host, Cisco / Nexus switching & routing, VLANs, DNS/DHCP, GNS3

Monitoring & SIEM: Wazuh (agents, centralized log collection), Grafana, Prometheus, Loki, Wireshark

Standards & Frameworks: OWASP Top 10, ISO/IEC 27001:2022 (Annex A controls), defense in depth, least privilege

Languages & Stack: Java, Python, JavaScript/TypeScript, SQL | Spring Boot, FastAPI, Node.js/Express, Angular, React | PostgreSQL, MySQL, MongoDB, Kafka | Ubuntu, Kali Linux, Windows Server

EXPERIENCE

Software Engineering Intern — Secure Back-End (ERP), Polymaille (Textile Industry) | Ksar Hellal, Tunisia · Jul – Sep 2026

- **Built a full-cycle ERP replacing a legacy system** as a Spring Boot Monolith with 4 business modules (purchase, stock, production, sales): supplier orders, approval workflow, delivery notes, invoices and payments, deployed on Windows Server.
- **Implemented authentication and authorization with Spring Security:** stateless JWT filter, BCrypt password hashing, and 5 roles enforced with method-level RBAC (@PreAuthorize) under least privilege, addressing OWASP A01 (Broken Access Control) and A07 (Authentication Failures); aligned with ISO 27001 A.5.15 / A.8.5.
- **Prevented injection (OWASP A03)** with Bean Validation and parameterized JPA queries, and **built a persistent audit trail** (who approved what, and when) on orders, invoices and payments for traceability and non-repudiation (OWASP A09, ISO 27001 A.8.15).
- **Scoped every module with the business lead** and validated it with users before delivery.

Full-Stack / Backend Developer, Alfa Computers | Mahdia, Tunisia · Mar 2024 – Aug 2025 (3 internships)

- **Built "The Hive" trading platform backend** with fully authenticated REST endpoints (FastAPI, JWT + OAuth2), documented in OpenAPI/Swagger and covered by Postman test suites.
- **Delivered a MERN e-commerce platform solo** (React, Node.js, MongoDB) with JWT login, containerized with Docker and auto-deployed through a GitLab CI/CD pipeline to Render.
- **Led a 3-person team** shipping a smart-home app (React Native + Node.js) streaming live Arduino sensor data.

PROJECTS

Secured Banking Infrastructure — team of 6 (2026) — GNS3 · Cisco Nexus · pfSense · Wazuh · Keycloak · OpenStack · AWS · GitHub Actions · Spring Boot · Kafka

- **Designed a defense-in-depth network in GNS3 with 5 security zones** (DMZ, administration, front-end, back-end, database): Cisco Nexus switches, routers, pfSense firewalls, a bastion host for admin access, Nginx reverse proxy, DNS/DHCP (ISO 27001 A.8.20 / A.8.22).
- **Deployed a centralized SIEM:** a Wazuh agent on every host, with logs forwarded through a collector to the central manager for security monitoring (ISO 27001 A.8.15 / A.8.16).
- **Automated deployment with GitHub Actions** to a hybrid cloud (OpenStack integrated in GNS3 + AWS): pipeline builds the Spring Boot JAR, AWS VM pulls it over SSH with keys stored in GitHub Secrets, removing all manual build and deploy steps.
- **Owned the KYC module** of a 7-microservice banking app (database per service, Kafka eventing) secured with Keycloak SSO (OpenID Connect) and RBAC. **Nominated, ESPRIT Projects Ball.**

Hermes Suite — E-commerce Platform (MERN) (2024 – present) — React · Node.js · MongoDB Atlas · Docker · Render

Full e-commerce platform (catalogue, cart, checkout, orders, PDF invoices) with JWT authentication, being matured into a multi-tenant SaaS.

Windows Server & Network Services Lab (2026) — Windows Server · Active Directory · Kerberos

Configured FTP, DNS and DHCP roles with Kerberos authentication and granular file permissions.

EDUCATION

ESPRIM Monastir — Engineering Degree, Cybersecurity & Cloud Computing (2024 – present) · top of class

ISiMa Mahdia — BSc, Software Engineering (2021 – 2024) · with highest honours

CERTIFICATIONS

CLLMSP & CRTOM (Red Team Leaders, 2026) | Cisco CCNA 200-301 (in progress) | Full-Stack MERN (100h) | Building AI Agents (DeepLearning.AI)
